

MUHAMMAD USMAN

Full-Stack AI Engineer | AI Systems & Autonomous Agents

mu.ai.dev@gmail.com | +92-325-6550687 | Lahore, Pakistan

LinkedIn: muhammad-usman-ai-dev | GitHub: MuhammadUsmanGM | buildwithusman.me

SUMMARY

Full-Stack AI Engineer building production-grade LLM systems, autonomous agents, and developer tooling. Shipped multiple open-source packages across PyPI, npm, and crates.io with thousands of real-world downloads. Currently delivering AI solutions for international clients.

KEY SKILLS

Languages & Frameworks: Python, TypeScript, JavaScript, Rust, SQL, FastAPI, Next.js, React, Node.js
AI/ML: RAG Pipelines, Agent Architectures, LangChain, Vector Databases, OpenAI, Gemini, Claude
Databases & Tools: Qdrant, PostgreSQL, SQLite, Supabase, Docker, Git, GitHub Actions, Vercel

WORK EXPERIENCE

Freelance Full-Stack AI Engineer | Self-Employed

Feb 2026 – Present

- Build and ship AI solutions for international clients — RAG chatbots, agent pipelines, and LLM web apps using Python, FastAPI, Next.js, and LangChain. (Client details withheld per confidentiality agreements.)
- Own the full project lifecycle – from scoping and architecture to production deployment – across document Q&A systems, automation bots, and vector-search APIs.

AI/ML Engineering Intern | DeveloperHub.co

Dec 2025 – Jan 2026

- Built 10+ ML/AI projects across two internship phases — classification, prediction models, and Gemini-powered chatbots using Python, Scikit-learn, and LangChain.

PROJECTS

Autonoma | Python, React 19, SQLite FTS5, asyncio, WebSockets

github.com/MuhammadUsmanGM/autonoma

- Built a production AI agent platform with a live telemetry HUD and unified gateway across Telegram, WhatsApp, Discord, and Gmail — cutting manual workload by 85%.
- Engineered a BM25-ranked SQLite FTS5 memory engine with importance-based decay and deduplication; achieving sub-5ms multi-session retrieval.

CodeLens | Next.js, Gemini Pro, Qdrant, LangChain, TypeScript

github.com/MuhammadUsmanGM/CodeLens

- Built a RAG pipeline over large codebases using AST-aware chunking, Qdrant vector search, and SHA-256 incremental indexing for sub-10ms retrieval across 40+ languages.
- Shipped as an npx CLI with 250+ downloads; grounds LLM responses in source-code truth, eliminating hallucinations for architectural discovery and onboarding.

FerrumDB | Rust, PyO3, Tokio, AES-256-GCM, Axum

github.com/MuhammadUsmanGM/FerrumDB

- Built a Rust embedded database engine (~1,000 lines) with O(1) reads/writes, AES-256-GCM encryption, atomic transactions, and a Bitcask-inspired log architecture.
- Shipped to PyPI, npm, and crates.io with thousands of real-world downloads; benchmarked sub-1µs GETs and 1,000 SETs in 2–5ms via Criterion.

EDUCATION

Bachelor of Science in Software Engineering

Virtual University of Pakistan

Oct 2024 – Expected 2028

Certified Agentic AI Engineer

Presidential Initiative for Artificial Intelligence & Computing (PIAIC)

Dec 2024 – Expected 2026
